## Key decision making factors

- Ability to support processes and protocols in a middle-eastern environment
- Capable in supporting multinational and multi-cultural supply chain of varying risk cognoscente
- Centralisation of many distributed spreadsheets to construct an agile and coherent risk reporting database whilst supporting the continued utilisation of those spreadsheets where appropriate

## Key functionality used

- Export / Import of data
- Defined User Roles and User Permissions
- Email alerts for actions due and overdue to support review process

## What they said about us

*"The system is easy to configure and user friendly. System Administration is simple compared to other similar products. The security model is simple and easy to manage, using a cascade methodology and the system back-up is incredible! The riskHive ERM system is meeting our needs and I am particularly pleased by the high user acceptance."*
